

DOCAVE ONLINE

FOR MICROSOFT OFFICE 365

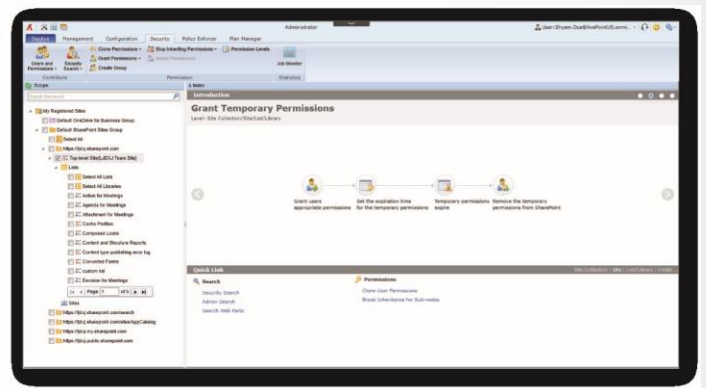

Your Cloud. Our SaaS. A Powerful Combination.

ADMINISTRATION

- **Centralized** – Manage SharePoint Online security, settings, configurations, and content in a single, unified dashboard.
- **Full-Fidelity Administration** – Copy, move, migrate and restructure SharePoint sites, content, and topology within or across SharePoint Online sites while preserving associated permissions and metadata tags.
- **Security Trimming** – Automatic security trimming and granular delegation to accountable users and Office 365 sites and content.
- **Temporary Permissions** – Assign temporary permissions to individual users or groups within SharePoint Online and audit all administrative actions.

Centralized Administration

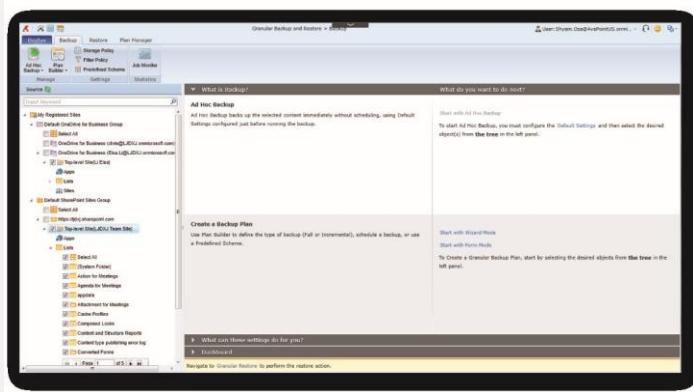

Grant Temporary Permissions

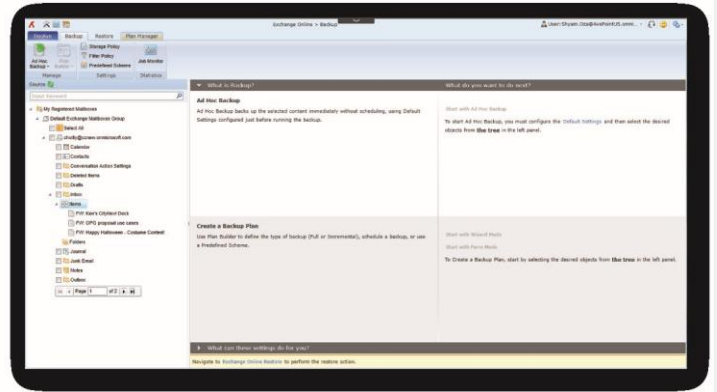

BACKUP & RESTORE

- **Granular Backup & Restore*** – Item level backup and restore for all SharePoint Online, OneDrive for Business, and Exchange Online components. Feature unsupported natively in Office 365*.
- **Platform Level Backup & Restore** – Backup and restore entire SharePoint Online, OneDrive for Business, and Exchange Online instances.
- **Backup & Restore Monitoring** – Track, manage, and report on all backup and restore processes through a centralized management console to monitor and enforce compliance with SharePoint policies.
- **External Storage** – Connect to storage devices over Secure File Transfer Protocol (SFTP) and File Transfer Protocol (FTP) networks.

- **Out-of-Place Restore** – Restore content directly to storage locations such as Amazon Web Services, Microsoft Azure, and FTP/SFTP enabled locations.
- **Backup & Restore for Exchange Online** – Export Exchange Online backup data as a .pst file type and restore to Exchange Server, Exchange Client, and Microsoft Outlook locations.

Backup for Exchange Online

MANAGEMENT

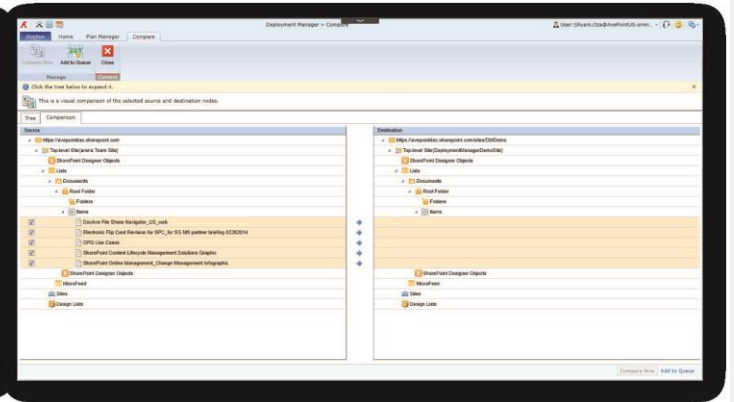

- **Restructure with Fidelity** – Copy, move, migrate, and restructure SharePoint sites, content, and topology within or across SharePoint Online sites while preserving associated permissions and metadata tags.
- **Granular Deployment** – Deploy select SharePoint objects and customizations to other locations, site collections, sites, lists, folders, items, apps, site or list settings, SharePoint Designer objects, site columns, content types, user solutions, custom features, and site definitions.
- **Scheduling** – Customize schedules to propagate changes outside of production hours.
- **List & Library Integrity** – Full support for all list types – including in-place records, document libraries, issues lists, discussion threads, and announcements – content metadata and configurations.
- **One-to-Many Element Propagation** – Propagate site elements from one object to multiple destinations to quickly make changes across sites or SharePoint Online environments.
- **Deployment Comparison** – Compare source and object details for propagation, compare propagated elements, and execute tasks from one object to another (or to multiple objects).
- **Rollback** – Automatic backup of a destination environment for easy rollback.

Deployment Comparison

MONITORING & POLICY ENFORCEMENT

- **Policy Enforcement** – Monitor, alert and automatically adjust unauthorized or out-of-policy changes to configurations, features, permissions, and settings with out-of-the-box, configurable rules.
- **Batch Mode** – Group controls over sites and site collections to quickly implement configurations and enforce policies in bulk and reduce costs associated with infrastructure management.
- **Configurable Rules** – Out-of-the-box and configurable rules monitor, alert, and automatically adjust unauthorized changes to configurations, features, permissions, and settings.

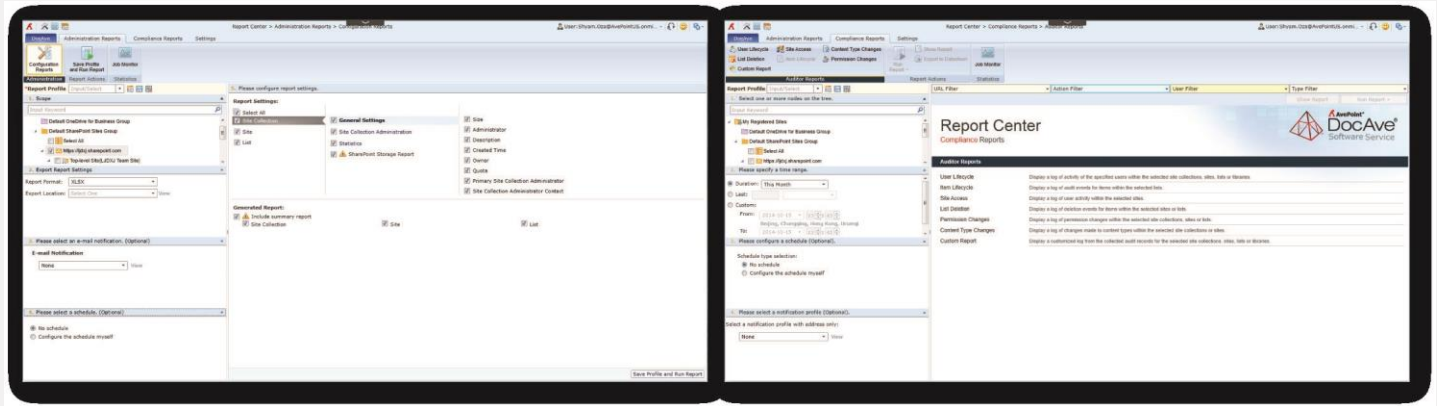

Policy Enforcer

Configurable Rules

REPORTING

- **Global Reporting** – Report generation for global SharePoint settings, security and content type usage.
- **Topology Overview** – View and monitor the 'as is' state of your SharePoint Online environment's topology and configurations.
- **Audit Reporting** – Audit report generation for: Content Type Changes, Custom Report, Item Lifecycle, List Access, List Deletion, Permission Changes, Site Actions, User Lifecycle.
- **Report Exportation** – Export reports to a local system or publish to SharePoint libraries for analysis.

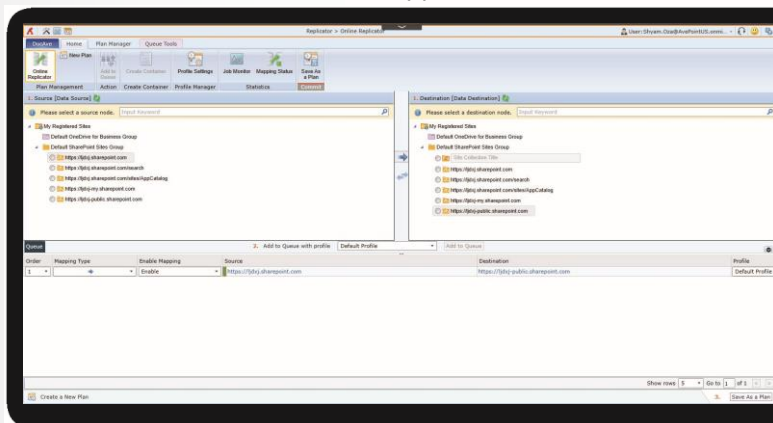

Global Reporting

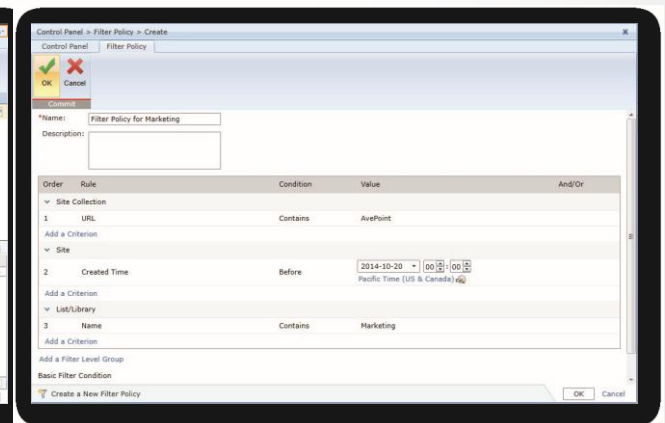

Audit Reporting

SYNCHRONIZATION

- Cross-Instance Replication – Replicate content locally within one site collection or keep multiple instances in sync down to the item level across Office 365.
- Filter Policies – Publish select SharePoint content across sites, lists, and libraries using policy filters based on built-in or custom metadata, such as approval status.

Cross-Instance Replication

Filter Policies
